

CEREC Smile Makeover (AACD Give Back a Smile Recipient)

Figures 1 & 2. Renee's after photo says it all. Changing a life one smile at a time is what it is all about. In addition, CEREC technology delivers the tools and precision to create accurate aesthetic restorations.

Figures 3 & 4. Tetracycline stained teeth are not the easiest teeth to aesthetically enhance. There is a tendency for the deep dental color to cast a blue ceramic influence when using bleach opaque porcelains. The Empress CAD bleach shades BL1-BL4 have been created for more warmth and helps counteract the blue effect. Renee's final restorations were created from BL2 blocks and bonded with Variolink Veneer +2.
