CADStar presents 4.0 full arch impressions and virtual design

CEREC Liftoff Online & Mentoring Program at cadstar.org

By James Klim DDS

CEREC 4.0 full arch

Transitional Prepress Paradigm MZ 100 Onlays

CEREC 4.0 provides incredible restorative design options. Full arch digital upper and lower impressions virtually mounted with the digital buccal bite registration. **Transitional** prepress onlays on lower posterior dentition and veneers on lower canines...virtually designed and milled from Paradigm MZ100. Incredible thin margins were achieved using the non-S Step bur. The initial seated occlusal contacts were close to 10 um.
